DETAILED ACTION

Response to Amendment

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Claim Rejections - 35 USC § 112

2. Claims 1-15, and 17-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, lines 5-8, it is unclear what is intended to be the claim limitation by reciting "a correlation between an input spread signal.... and a spread code corresponding to each of the plurality of channels" in "a correlation between an input spread signal which is respectively transmitted over the plurality of channels and a spread code corresponding to each of the plurality of channels". The preamble of the claim claiming a receiving device, however, the path detector of the receiving device seems to correlate the input spread signal to a spread code corresponding to each of the plurality of channels, of which the two correlated elements refer to that of a transmitter instead of a receiver. The following claim language seems to suggest a correlation occurs at a receiving device by the path detector: "a correlation between each received spread (data) signals.... and a spread code corresponding to each received spread signals in a respective channel". The same remark applies to claims 4, 5, 6, and 13.

Regarding claim 1, lines 10-11, it is unclear what is intended to be the claim limitation by reciting "demodulating a corresponding spread signal among the spread signals according to the timing signal generated by said path detector" in "a plurality of despread demodulators, which are arranged for the plurality of channels, for demodulating a corresponding spread signal among the spread signals according to the timing signal generated by said path detector". The recitation seems to emphasize a single function of all the despread demodulators – that is to demodulate a particular spread signal among the spread signals according to the timing signal generated by the path detector for all channels, which is untrue. The same remark applies to claims 4, 5, 6, 13, 18, and 19.
